13. This Court has jurisdiction over the subject matter of this action under 28 U.S.C. §§ 1331, 1332, and 1338(a).

14. This Court has general and specific personal jurisdiction over Defendant because, directly or through intermediaries, Defendant has committed acts of infringement within this District giving rise to this action, is present in and transacts and conducts business in this District and the State of Florida, and transacts and conducts business with residents of this District and the State of Florida.

15. Telcom's causes of action arise, at least in part, from Defendant's contacts with and activities in this District and the State of Florida.

This Court also has personal jurisdiction over Defendant because each does continuous and systematic business in this District, including by providing infringing products and services to the residents of this District that Defendant knew would be used within this District, performing and having residents of this District perform infringing methods within this District, and by soliciting business from the residents of this District.

19. For example, Defendant is subject to personal jurisdiction in this Court because Defendant, itself and/or through agents, regularly solicits and transacts business in this District and has established places of business in this District. Accordingly, this Court's jurisdiction over Defendant comports with the constitutional standards of fair play and substantial justice and arises directly from Defendant's purposeful minimum contacts with the State of Florida.

THE ACCUSED PRODUCTS

53. In or around October 20, 2014, Defendant launched "Apple Pay," a mobile payment service capable of facilitating payment via an Apple iPhone smartphone ("iPhone").¹

54. At least one way Apple Pay enables a user to make purchases is by using near-field communication (NFC) technology on equipped iPhones.

55. NFC transmissions are short range transmissions and require devices to be in close proximity to one another to facilitate users to make secure transactions between two NFC-capable devices.²

56. One method to conduct a financial transaction using an iPhone utilizes a biodata scanner integrated in the iPhone to sense physiological data such as a fingerprint or facial scan associated with a user of the iPhone to verify the identity of the user.

57. After verification of the user, an Apple Pay equipped iPhone communicates with a payment terminal via NFC signaling to complete the transaction wirelessly when the iPhone is in range of the payment terminal.³

58. Defendant manufactures, uses, tests, markets, offers for sale, sell, and/or imports into the United States iPhones that are enabled with Apple Pay for making secure electronic payments.⁴

59. The term “Accused Products” as used herein refers to all products manufactured, used, tested, imported, sold, offered for sale, and imported by or on behalf of Defendant that embody the devices claimed by the Asserted Patents and all processes employed by Defendant that, whether directly or indirectly, practice the methods claimed by the Asserted Patents, including without limitation, Defendant’s iPhones that support Apple Pay, and associated methods for using Apple Pay, including at least the following: iPhone 5 (including iPhone 5c), iPhone 6 (including iPhone 6s, 6 Plus, and 6s Plus), iPhone SE (including first, second, and third generations), iPhone 7 (including iPhone 7Plus), iPhone 8 (including iPhone 8 Plus), iPhone X (including iPhone XR, XS, and XS Max), iPhone 11 (including iPhone 11 Pro, and 11 Pro Max), iPhone 12 (including iPhone 12 Mini, 12 Pro, and 12 Pro Max); iPhone 13 (including iPhone 13 Mini, Pro, and Pro Max); iPhone 14 (including iPhone 13 Plus, Pro, and Pro Max); iPhone 15 (including iPhone 15 Plus, Pro, and Pro Max).

60. On information and belief, Defendant has pre-loaded or made available via an over-the-air update or through the Apple application store (“App Store”), each of the above iPhones with Apple Pay, thus allowing its users to utilize the infringing functionalities of Apple Pay without a direct download from a user.
